

13-STEP LEGAL INTELLIGENCE & VERIFICATION PIPELINE

Phase I to Phase III: Evidentiary Ingestion, Statutory Audit, Article 141 Synthesis & Adversarial Red-Team

PHASE I: FACT & STATUTORY AUDIT	PHASE II: JUDICIAL SYNTHESIS	PHASE III: DEFENSE STRENGTHENING	PHASE III: COUNTER-ATTACK AUDIT
STEP 1: Fact Matrix Ingestion	STEP 3: Precedent Retrieval	STEP 5: Lower Authority Errors	STEP 7: Adversarial Red-Team
Parses SCN, DRC-07, invoices, bank records, and bilties. Extracts dates, UTRs, HSN codes, and supplier GSTIN history automatically.	Retrieves applicable High Court & Supreme Court rulings indexed by legal issue, financial year, and factual matrix alignment.	Audits notice for non-application of mind, jurisdictional overreach, mechanical Section 74 invocation, and denial of natural justice.	Simulates aggressive Revenue counterarguments (e.g. non-obstante Sec 16(2), Section 155 burden) to test defense resilience.
STEP 2: Statutory Parameter Audit	STEP 4: Article 141 Hierarchy	STEP 6: Submission Optimizer	STEP 8: Evidence Gap Engine
Evaluates 8 core statutory tests (NGTP-P1 to P8): Rule 46 particulars, physical transit (16(2)(b)), 180-day bank remittance, and GSTR-2B prospective rules.	Audits precedent bindingness under Art. 141. Binds Supreme Court <i>Suncraft Energy</i> ratio requiring Revenue to first pursue defaulting seller.	Drafts court-ready, fortified appeal submissions structured in classical IRAC format (Issue, Rule, Application, Conclusion) with statutory citations.	Identifies missing transit records, absent bank statements, or lack of Circular 183 CA certificates, categorizing them as P0 (Mandatory) or P1.

13-STEP LEGAL INTELLIGENCE & VERIFICATION PIPELINE

Phase IV & V: Mathematical Readiness Scoring, Appellate Viability & Autonomous Decision Engine

PHASE IV: QUANTITATIVE SCORING	PHASE V: FORWARD LITIGATION TREE	PHASE VI: FINAL ACTION VERDICT
STEP 9: Litigation Readiness Score (0-100) Deterministic 7-factor evidentiary scoring: • Statutory Position (Max 20) • Evidence Quality & Transit (Max 20) • Precedent Binding Weight (Max 15) • Lower Authority Error Audit (Max 15) • Counterargument Resilience (Max 10) • Procedural Soundness (Max 10) • Drafting Quality (Max 10)	STEP 11: Forward Litigation Decision Builds dynamic remediation roadmap: • Potential Score Post-Remediation: Quantifies expected score increase after attaching missing records. • P0 Remediation: Must attach bank RTGS statement before filing appeal. • P1 Remediation: Secure E-Way bills & Circular 183 CA Certificate.	STEP 13: Executive Verdict & Export Delivers definitive, unambiguous decision: • PROCEED (80 - 100): Fully fortified appeal; high probability of complete relief. • PROCEED AFTER RECTIFICATION (60-79): Cure evidence gaps before filing. • HOLD (40 - 59): High litigation risk (missing transit/payment). • DO NOT PROCEED (<40): Fatal evidentiary void. • Export: Generates court-ready legal dossier.
STEP 10: Appellate Viability Modeling Calculates statistical win-probability across appellate forums (First Appellate Authority, High Court Writ) calibrated against historical precedent trends and evidentiary burden under Section 155.	STEP 12: Draft Defect & Trap Audit Scans draft grounds for fatal legal traps, inadvertent concessions of supplier non-payment, incorrect section citations, and ensures compliance with Rule 46 Rule 138 mandatory particulars.	SYSTEM ARCHITECTURE SUMMARY Deterministic & Non-Hallucinatory: The engine uses rules-based statutory logic and Article 141 judicial graphs to guarantee that scores reflect hard evidentiary law rather than AI guesswork.
